(54) Title: **VEHICLE SEAT ASSEMBLY**

(57) Abstract: A vehicle seat assembly (10; 110) includes a passenger seat having a passenger seat member (26) and a passenger seat back (12), and a child seat assembly (72) having a seating part (74) and a back rest part (76). The child seat assembly 72 provides first and second alternative child seat configurations. In one embodiment, the seat assembly (110) includes a passenger seat member (26) which is movable between a first position in which the child seat assembly (72) is substantially hidden from view and a second position in which the child seat assembly (72) is exposed to enable the first child seat configuration to be unfolded to seat a child passenger. The child seat assembly (72) may be mounted so that it can be removed completely from the assembly (110). In another embodiment, the passenger seat member (26) is movable between a first position in which a seating surface is defined for an adult passenger, and a second position in which, for example, a reverse side of the seat member (26) defines a back rest surface for a child passenger.
